Projects and Involvement

Weightle — Chain Restaurant Guessing Game Personal Project
Fullstack Development - View on GitHub | Play Live *2026*
- Built a Wordle-style guessing game in React 18 and TypeScript, deployed via CI/CD pipeline on Vercel
- Implemented autocomplete search with custom keyboard navigation and zero-latency local data filtering
- Designed responsive UI with accessible CSS layouts and tooltip modules across desktop and mobile viewports

NBA Lineup Fit: Talent vs. Complementarity Personal Project
Data Analytics & Statistical Modeling | Python, SQL - View on GitHub *2026*
- Analyzing multi-season NBA lineup data to test whether complementary skill fit adds value beyond player talent
- Building four-player core profiles across shooting, creation, play making, rebounding, and defensive dimensions
- Developing reproducible Python/SQL pipeline and statistical models comparing lineup fit against player talent

University of Toronto Students' Union Toronto, ON
Events & Sponsorship Coordinator *Jan 2021 - May 2022*
- Coordinated campus-wide events, including tournaments and student engagement activities with 70+ attendees.
- Managed event logistics such as registration, budgeting support, vendor communication, and on-site operations.
